March Virtual Meeting

Kevin Felderhoff

Brevard, North Carolina

940-372-2582

Kevin Felderhoff was born and raised in Muenster, Texas and earned a BS of Industrial Technology with an emphasis in Construction Management from Texas State University in San Marcos, Texas. He has lived in Birmingham, Alabama, Gainesville, Texas and currently lives in Brevard, North Carolina where he turns and designs furniture as a hobby. Kevin's love for building and working with wood began during his high school years. He was fortunate to have an awesome shop teacher who taught him great wood working techniques. Mastering these techniques led to his building two roll top desks and his love for furniture design began. He continued creating pieces using reclaimed and rescued wood. While in Alabama, a colleague introduced him to woodturning and Kevin quickly became involved with the Alabama Woodturners. He is currently involved with the Carolina Mountain Woodturners and the Golden Triangle Woodturners In Denton, Texas.

Kevin takes notice of the artistry in the imperfections of salvaged wood and seeks to enhance the beauty inside each piece. The most interesting pieces are turned end grain and the most dramatic pieces come from logs or branches that have very irregular shapes far away from round. Some of his favorite turnings are the flying winged vase and the cowboy hat. The flying winged vase is turned down the end grain from a crotch so when turning the piece, it appears to have wings. Turning for Kevin is stimulating and mentally challenging. He analyzes the rescued wood and calculates the best angle at which to mount the piece on the lathe. Beside turning, he also enjoys designing furniture and creating unique functional and nonfunctional art pieces. It is rewarding to Kevin when he rescues a gnarly piece of wood and unveils an exquisite piece of unique art.

Kevin strongly believes in giving back to others by sharing his knowledge and experience. He gives demonstrations at local and regional symposiums, art galleries and Interactive Remote Demonstrations (IRD). He also gives private and group lessons to adults and children.

Natural Edge Vase Demo

Learn how to turn a Natural Edge Vase that will be an heirloom treasure to enjoy for many years.

The demonstration emphasizes turning with a gouge. When planning a project, I will seek the natural beauty of the wood. The orientation of the piece is important. One needs to strive to bring out the beauty inside the piece and one position may prove better than another. I will begin the demonstration with a discussion of basic woodturning and move into the turning of the Vase.

Key Points / Outline:

1. Safety
2. What to look for in the piece
3. Mounting the piece Safely on the lathe
4. Pleasing Shape for the vase
5. Turning Process
 - a. Tenon / Faceplate
 - b. Neck
 - c. Keeping the bark on
 - d. Intermediate Cuts –
 - i. Tool position
 - ii. Sharpness of the tool
 - e. Drill starter hole
 - f. Hollowing with a Camera
 - g. Turning the lower part of the vase
6. Drying – talk about only
7. Sanding – talk about only
8. Finish – talk about only
9. Jam Chuck and turning foot
10. Questions

February Demos

The Hunt County Woodturners (HCW) invited us to join their virtual demo with Par Carroll from Ireland. He demonstrated a Pewter inlay square textured lidded box. It was an excellent demo and a big thanks to Pat, Chole, and Helen for staying up past 2am! He has some YouTube videos out and has a Meet the Woodturner videos.

www.patcarrollwoodturning.com

John Beaver's demo for February was very interesting and showed us a simple way to accent a bowl. Though the basic design is easy, you can sure make it as complicated as you would like! He also has a jig for the bandsaw to cut a perfect curve for these bowls. The plans are available on his website at johnbeaver.net and he offered a discount to the club if interested.

BOWL GOUGE BASICS – SHAPES

There are several different bowl gouge flute shapes. The shape of the flute is created by the shape of the milling tool used to mill out the flute area. Some bowl gouges, especially older models are made with deep “V” shape, or a deep “U” shaped flute designs. Both of these gouge shapes are generally regarded as less desirable because they can catch or grab easily and don’t provide a smooth even cut. The most popular bowl gouge flute shape is the parabolic or modified shorter “U” shape that leaves an even thick path of supportive metal at the base of the gouge. Another name for this gouge profile is a “super-flute.”

Quote of the Month

My biggest fear is that, when I die, my wife will sell my tools for what I told her I paid for them

-Tom Brouillette

Miscellaneous Club Information / Upcoming Activities

| Upcoming Demos | Bring Back Winners |
|----------------|--------------------|
| April—TBD | None |
| May—TBD | |
| June—TBD | |

Website and Membership

Additional club information can be found on the website:

www.goldentrainglewoodturners.org

Our monthly pictures, handouts, and up coming activities are posted on the site. You can even see yourself and others in the club!

Membership sign-ups and renewals can be filled out and paid on the website.
